

- Task Management:
 - Since this a SAAS model, each entity should have SuperAdmin, Admin & User roles.
 - Revisit the architecture to accommodate the above
 - Task Creation: Users can create tasks with details such as due dates, priorities, occurrence (One-time, daily, weekly, monthly, yearly etc...) and descriptions.
 - Assignment: Assign tasks to specific individuals
 - Progress Tracking: Monitor the status of tasks, including completion percentages and timelines.
 - Deadline Alerts: Set and monitor deadlines for tasks. Notify users about upcoming task deadlines or overdue tasks.
- Collaboration Tools:
 - File Sharing: Allow team members to share project-related documents, images, and other files.
 - Both Admin and user should be able to enter the comments and view it
- Reporting / Dashboard
 - Progress Reports: Generate reports on the progress of tasks and projects. (we can discuss)
- Mobile Accessibility:
 - Mobile Apps: Provide mobile applications to allow users to manage tasks and projects on the go. (Later)
- Security:
 - Data Security: Implement measures to secure data and sensitive information.
